# DIGI XBEE® CELLULAR NB-IoT

Digi XBee Cellular NB-IoT embedded modems provide OEMs with a simple way to integrate low-power narrow-band cellular connectivity into their devices.

Digi XBee Cellular Narrowband IoT (NB-IoT) is a low-cost, low power wide area (LPWA) embedded cellular modem designed specifically to handle small amounts of data over existing cellular networks, provide improved range, and optimized for maximum battery life.

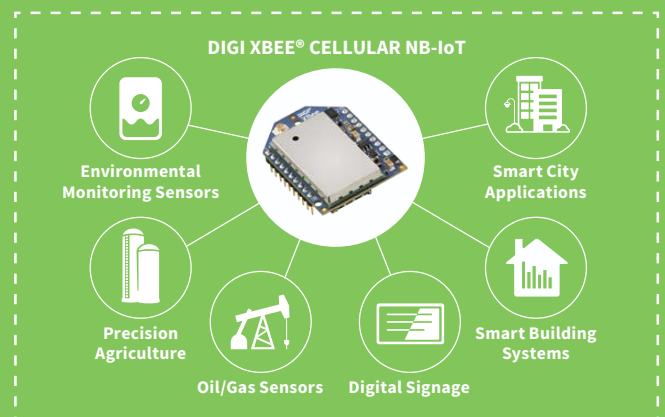

The modem is programmable, with support for custom MicroPython applications running directly onboard, allowing users to more efficiently manage their devices and eliminating the need for an external microcontroller in certain use-cases.

It includes the full suite of standard Digi XBee API frames and AT commands, so existing customers can simply drop this modem into their existing designs to instantly achieve cellular integration, without the pain and hassle of doing a complete re-design. It is also CE/RED certified, making it ideal for use in LPWA applications in Europe.

## BENEFITS

- Extremely low power consumption for battery life of 10+ years
- Excellent coverage and building penetration
